          The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The
                                                                                                                        diagnostics, forensics, responsible for genetic biodiversity -
                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           associated subunits (TAF's) are components of the transcription factor TFIID and are thought to mediate transcriptional activation. This encode protein may be produced recombinantly from transformed host cells or purified from human cells. hTAFIII05 specific binding agents such as specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFIII05 transcripts), therapy (e.g. gene hybridisation screens for hTAFIII05 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating cell specific activators or other transcriptional regulators).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in a supplement of a consequence of the sequences have applications in

            gene
                   The TATA-binding protein associated factor hTAFIII30 (including specific antibodies and fusion products) are used in drug screeni diagnostics and therapeutics. They are used in the development c specific biochemical assays for screening compounds that agonise antagonise selected transcription factors involved in regulating
                                                                                                               TATA-binding protein associated protein factors corresponding nucleotide sequence and deriv. and in screening, diagnostics and therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This represents a polypeptide comprising a (modified) fragment (I) of a TATA box-binding protein associated factor II 105 (TAFIII05). A pharmaceutical composition comprising (I) or the polynucleotide or an inhibitor or antagonist of (I) is useful for treating cancers and inducing apoptosis in pathological cells. The composition is also useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-JAN-1994;
28-JAN-1993;
30-JUN-1993;
                   The invention relates to purified proteins involved in transcription by RNA polymerase II, the RNA polymerase which transcribes messenger RNA. RNA polymerase II transcription proceeds in vitro upon addition of several nuclear fractions designated TFIIA, B, D, E, F, H, I and I to RNA polymerase II holenzyme. Fraction TFIID has been shown to contains a TBP and other TAFs. Purification of TFIID and separation cits components reveals 7 proteins ranging in size from 30-250 kD.
                                                                                                                                                                                                           This is the amino acid sequence of the human TATA-binding protein (TBP) associated factor (TAF) designated TAFIII30. The protein is a component of the TFIID fraction required for reconstituting RNA polymerase II in vitro transcription activity. The encoded protein has an estimated mol.
                                                                                                                                                                                                                                                                                                                                                                                                Screen for cpds. that bind human TATA-binding protein associated factor - by testing ability to bind to polypeptide fragments of factor, useful as (ant)agonists of transcription factors involved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tjian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US5534410-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human TATA-binding protein

     AAW25018 represents TATA-binding protein associated factor (TAF) polypeptide, hTAFII100 (mol. weight 100kD). TAF peptides derived from hTAFII30 alpha, hTAFII30 beta, hTAFII40, hTAFII70, hTAFII700, hTAFII100, hTAFII130 hTAFII300, hTAFII30 hTAFII110 and nucleic acids encoding them, are used to modulate transcription, including transcription initiation. TAFS are nuclear proteins involved in RNA polymerase I, I and III transcription. The peptides act by binding to a different TAF, an activator, or TBP (TATA-binding protein) or competitively inhibiting association of a TAF domain with another compound, typically a protein like TBP or another TAF, an activator, or DNA.
                                                                                                                                     Claim 1;
                                                                                                                                                                   Nucleic acids encoding human TATA-binding protein associated (TAF) peptide(s) - for production of recombinant peptide(s),

                                                                                                                                                           The invention relates to three polymorphic variants of a rat transcriptional regulatory factor Elf-1 (ARAB33190-B03192) and nucleic acids encoding them (ARAB1645-861647). The invention also encompasses the use of Elf-1 for regulating the transcription of a gene in an expression vector. The cDNA encoding rat Elf-1 variant #1 (ARAB1645) was isolated using PCR primers (ARAB1644-861649) based on mouse Elf-1 cDNA, and the rat Elf-1 variant #2 and 3# cDNAs (ARAB1646-A61647) were subsequently isolated. The Elf-1 cDNA and protein sequences are potentially useful for the prevention and treatment of immunological and allergic diseases mediated by Elf-1. The present sequence represents a variant (#3) of rat Elf-1.
                                                                                                                                      Sequence

                                                                                                                                                                                                                                               The invention relates to three polymorphic variants of a rat transcriptional regulatory factor Elf-1 (AAB03190-H03192) and nucleic acids encoding them (AAB61645-A61647). The invention also encompasses the use of Elf-1 for regulating the transcription of a gene in an expression vector. The cDNA encoding rat Elf-1 variant #1 (AA61645) was isolated using PCR primers (AAA61648-A61649) based on mouse Elf-1 cDNA, and the rat Elf-1 variant #2 and 3# cDNAs (AAA61646-A61647) were subsequently isolated. The Elf-1 cDNA and protein sequences are potentially useful for the prevention and treatment of immunological an allergic diseases mediated by Elf-1. The present sequence represents a variant (#2) of rat Elf-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to three polymorphic variants of a rat transcriptional regulatory factor Elf-1 (AAB03190-B03192) and nucleic acids encoding them (AAB1645-A61647). The invention also encompasses the use of Elf-1 for regulating the transcription of a gene in an expression vector. The cDNA encoding rat Elf-1 variant #1 (AAB61645) was isolated using PCR primers (AAA61648-A61649) based on mouse Elf-1 CDNA, and the rat Elf-1 variant #2 and 3# cDNAs (AAA61646-A61647) were potentially useful for the prevention and treatment of immunological ar allergic diseases mediated by Elf-1. The present sequence represents a variant (#1) of rat Elf-1.

                                   AAM38685 standard;
                                                                                                                                                                                                                                                          Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptices (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous snjuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as

Example 3; SEQ ID NO 1830; 10078pp; English.

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activitic such as: Immune system suppression, activity, hamcatic/chemokinetic activity, hamcostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and specification. .N.S disorders. ote: The sequence data for this patent did not moot part of the printed
